More enrolments. Same media budget.

Education acquisition · Meta + Google Search · July–August 2026 · USD

USD 3,000	108 → 168	14 → 24	−41.7%
Media budget each month	Qualified enquiries	Net enrolments	Media cost per enrolment

THE BRIEF AND MY ROLE

Acquire parents for a paid introductory session that could lead to an education programme. I led budget, targeting, keyword exclusions, creative briefs and landing-page/CRM coordination. The centre team handled qualification, payments, attendance and enrolment.

WHAT I CHANGED

1 Aug Removed job/toy research queries; reviewed brand and non-brand Search separately.

8 Aug Added offer and location qualification; routed received enquiries to the centre team.

15 Aug Reviewed qualified and paid outcomes, then revised creative copy. Kept the Meta and Search budgets unchanged.

HOW THE FUNNEL CHANGED

OUTCOME	JULY	AUGUST
Unique enquiries	180	240
Qualified enquiries	108	168
Net paid introductory bookings	54	84
Attended	42	68
Net programme enrolments	**14**	**24**
Media cost per net enrolment	USD 214.29	USD 125.00

Google Search: nine of the 24 August enrolments

With **USD 1,200/month**, qualified enquiries increased **24 → 60**, cost per qualified enquiry fell **USD 50 → USD 20**, and net enrolments increased **3 → 9**. The other 15 August enrolments came from Meta at USD 1,800 media spend.

Search is included in the total above. It is not an additional campaign result.

WHAT THIS DEMONSTRATES

I connected targeting and creative decisions to qualified and paid outcomes while holding spend constant. This is a before/after operational comparison; it does not isolate the effect of any single change or establish profit.

Source: candidate-confirmed campaign results and context, 26–27 Oct 2026; original Ads/CRM/payment exports are not attached. Cohorts: 1–31 Jul and 1–31 Aug 2026, Vietnam time; 30 days of follow-up per enquiry, frozen 31 Aug and 1 Oct. Net counts exclude refunds. Media cost excludes fees and overhead. Counting rules and channel reconciliation →

Fix the signal. Make a better decision.

CRM, consent and campaign diagnosis · separate October and July cases

TRACKING: FIND THE GAP BEFORE OPTIMISING

TeeTee&Co. registration funnel. CRM was recording 12–15 registrations/day while Meta showed 0–2. The retained review identified restrictive consent gating; the server-side Lead shared the same gate. I owned the funnel and measurement changes, revised on 21 October.

Post-fix review · 22–24 October 2026

36 valid CRM enquiries → 25 consented → 25 unique Lead events

25/25 eligible enquiries matched. The 11 people who declined marketing consent generated zero marketing events. That means measured coverage was 25/36 of all CRM enquiries (69.4%), not 100%.

25 browser + 25 server events used shared event IDs and resolved to 25 unique Leads. Implementation: direct tags and server-side Lead.

Quality assurance

Reported 24/24 checks passed on 22 Oct: consent granted/refused, invalid input, duplicate retry, unpaid booking and refund, across four channel/device variants.

The 24 QA checks and 36 monitored enquiries are separate populations.

Reporting discipline

32/36 enquiries had a known source; four remained unknown. I keep unknowns visible and match payment/refund records before reporting a paid result.

Production experience shown here is direct tags. A published GTM container is not part of this case.

Post-fix observations confirmed by me on 27 Oct. Original QA logs and platform exports are not attached. Review scope and counting rules →

A SEPARATE OPTIMISATION DECISION · THREETREES, JULY 2026

Problem: a chat creative was running under an objective that did not match its purpose.

Action: I corrected the objective, reallocated the existing budget and used daily results to guide the next allocation. Two media buyers operated the account with me.

54 → 71	Same spend	440
Approx. daily conversations	Daily budget unchanged	Conversations on rebuilt ad

The practical value: diagnose objective, funnel and measurement issues before requesting more budget. Conversation growth is an early-funnel result, not evidence of higher sales.

Separate retained ThreeTrees campaign records. Approximately +31% daily conversations; rebuilt ad cost approximately USD 0.59/conversation. Observational comparison, not a controlled experiment.

Practical AI. Clear creative thinking.

Work samples and proposed applications for Meta Robotics

AI MAKES THE WORK FASTER; REVIEW KEEPS IT USABLE

I define the marketing task, specify what a useful output looks like, then review the result before acting. My role is workflow design, prompting, checking and AI-assisted delivery.

50 enquiries	150 → 60 min	48/50
Separate reported evaluation	Processing, including review	Initial labels accepted; two corrected

Candidate-reported workflow evaluation; underlying timing/label logs are not attached. This result is separate from the software prototypes below.

WORK SAMPLES YOU CAN OPEN

Taste Brief · research to a test brief

Personal Claude + Qloo research prototype for podcast shortlists and ad-test briefs. Shows how I structure research into marketing decisions. Source code →

Landing-page delivery

Halo Lamp and Northfield Physio: two fictional-brand website demos, four responsive pages, built with AI assistance. No client sales claim.

Lead-routing prototype

n8n workflow for scoring and routing enquiries. Fourteen HTTP scenarios checked with a real n8n instance and simulated provider responses. Test record →

HOW I WOULD APPLY THIS TO META ROBOTICS

Proposed creative test: two parent motivations, one RDA offer, the same booking definition. These are draft concepts, not launched ads.

ANGLE A · PURPOSEFUL SCREEN TIME

"What could your child build?"

Show the child moving from watching to building a robot; end with the parent conversation.

Copy: Turn curiosity into a hands-on robotics experience. Book a S$30 RDA session with Meta Robotics.

ANGLE B · FIT BEFORE COMMITMENT

"See how your child learns."

Show a learning task, a short explanation and the personal report.

Copy: Explore robotics with a 45-minute activity and a 15-minute parent consultation. Start with a S$30 RDA.

Decision rule: compare qualified enquiries and net paid bookings by angle; review enrolments after follow-up. Use click-through rate to diagnose the ad, not to choose the winner on its own.

Offer reference: Meta Robotics RDA, checked 27 Oct 2026. Centre approval required for offer wording, child imagery, consent and availability before launch.

What I would deliver in the first month.

A focused Meta Robotics proposal · SGD · subject to agreement

First establish a reliable booking signal. Then test one offer.

RDA pilot: Meta for parent discovery; Search for existing intent. Agree lead quality with the centre team and report through to enrolment.

FIRST-MONTH DELIVERY · PROPOSED

2–6 Nov	**Prepare:** agree qualification, capacity and handoff; check consent, CRM and payment/refund matching. Approve copy and landing page.
9–15 Nov	**Launch:** one offer, Search groups and two Meta angles, after preflight checks. Media cap: SGD 900.
16–22 Nov	**Improve:** review queries, qualification and centre feedback; adjust exclusions, message and routing. Media cap: SGD 1,000.
23–29 Nov	**Decide:** review paid outcomes and capacity; allocate within the SGD 1,100 cap. Continue follow-up after acquisition closes.

One useful weekly update

Results: spend → qualified enquiries → net paid bookings → enrolments.

Interpretation: quality/cost changes and centre feedback.

Action: changes made, next test and decisions needed.

Clear ownership

I own: campaigns, test briefs, tracking coordination and weekly analysis.

Centre team owns: response, qualification, capacity, payments and refunds.

Agree alert escalation and cover outside my working hours before launch.

BUDGET AND SUCCESS CRITERIA

SGD 6,000 total planned cost: media 3,000 (Meta 1,800 + Search 1,200); management 2,000 (80 hours/four weeks); later follow-up 300 (12 hours); other pilot costs 700. Full breakdown in the workbook.

Working target: **net paid-booking media cost ≤ SGD 45**, subject to confirmed margins and capacity. The workbook models 70 net bookings and 18 net enrolments as a base scenario, with downside and sensitivity cases. These are planning assumptions, not promised results.

Working together

20 hours/week · available 2 November 2026.
Monday–Friday, 8–10 AM and 7–9 PM Singapore time. English updates and calls within agreed overlap. Hanoi, GMT+7.

Six-tab workbook: economics, delivery, QA, evidence, Search and copy →

This is a proposed SGD plan, separate from the historical USD case. QA has not been run for Meta Robotics. Outcomes followed through 29 Dec; latest 90-day contribution window closes 29 Mar 2027. No campaign has been launched by this application.
