Campaign evidence for Meta Robotics

Meta acquisition, registration funnels and measurement, with earlier Google campaign records. Start with the three cases, then the outside audit and proposed priorities. View the online portfolio

YOU ASK FOR	MY EVIDENCE	WHERE
2+ years managing Meta and Google Ads	Paid acquisition since 2021 across six industries. Meta case records on pages 2 to 3; Google Search, Performance Max and earlier Display records on pages 4 to 5.	Pages 2 to 5
Lead generation, not awareness	226 form leads in retained 2021 property records; 7,479 conversations and 51 free registrations in 2026. Outcome definitions and periods are shown with each case.	Pages 2, 3, 5
GA4, GTM and Meta Pixel tracking	GA4 ecommerce events, Google Ads conversion tag, Pixel and Conversions API Lead; a tracking gap found by reconciling CRM and Pixel. Tags in site code: no GTM container in production yet	Pages 3 to 4
Budget optimisation, data into action	Existing budget reallocated: about 54 versus 71 conversations a day around the change, at the same daily spend. Observational comparison; monthly totals shown separately.	Page 2
Landing pages, CRM, SEO, AI	Membership funnel I own (523 members); Search Console, schema and Business Profiles; AI for research, copy and checks	Pages 3 to 4
Proactive, remote, English	An outside audit of your live ads and landing page before being asked; UK degree taught in English (2:1); GMT+7	Pages 6 to 7

HOW TO READ THE FIGURES

Read each result with its objective, period and my role. Conversations, free registrations and paid customers are separate outcomes. Page 5 distinguishes retained older records from self-reported budget estimates; pages 6 to 7 are proposals, not past results.

SELECTED EVIDENCE

7,479
Messenger conversations at about USD 1.21 each, ThreeTrees, Jul to 23 Oct 2026

51 registrations
VND 3.05M spend, about USD 2.30 per free member, 1 to 7 Oct 2026

Funnel ownership
Landing page → form → CRM → email follow up; measurement limits on page 3

CONTENTS

Page 2 Case 1 · ThreeTrees: 7,479 conversations in under four months
Page 3 Case 2 · Form starts to completed registrations
Page 4 Case 3 · Google Ads and measurement
Page 5 Career: six industries since 2021
Page 6 Outside audit and Google Search plan for Meta Robotics
Page 7 What I would focus on

USD at about VND 26,000. Every figure in this portfolio comes from ad platform exports, CRM records, or my own estimates where marked approx.

Case 1 · ThreeTrees: 7,479 conversations in under four months

Silver jewellery retailer, Hanoi · Meta Ads, Click to Messenger lead generation · July to October 2026 · my role: Team Lead (objectives, budget, test decisions, daily reporting) with two media buyers

7,479
Messenger conversations, 1 Jul to 23 Oct 2026 (2,063 · 2,095 · 2,026 · 1,295)

USD 9.1K
Meta spend, Jul to 23 Oct; comparable Jul–Sep monthly spend

USD 1.21
average cost per conversation

148K
link clicks; CTR 3.66% in August

GOAL AND SETUP

Drive store visits and sales through Messenger conversations that sales staff close. Campaigns: Messages (main), Engagement for a wedding fair and branding, Traffic. Most store invoices come from customers who walk in, so ROAS cannot be attributed to ads; I manage on cost per conversation and check store sales alongside.

WHAT THE DAILY REPORT SHOWED

Our team launched a new July creative under a Sales objective (one day, VND 164,595, 0 messages) and then Traffic (VND 765,128, 48 clicks, 0 messages). The daily report caught our own mismatch within two days: the creative was built to start a chat, so it was rebuilt as a Messages ad and became the best performer of the month.

SAME CREATIVE, THREE OBJECTIVES

OBJECTIVE	DATES	SPEND (VND)	CONVERSATIONS	COST EACH
Sales	9 Jul	164,595	0	none
Traffic	from 10 Jul	765,128	0 (48 clicks)	none
Messages	**from 11 Jul**	**6,710,025**	**440**	**≈ 15,250**

CONVERSATIONS A MONTH, JULY TO OCTOBER 2026

The rebuilt creative recorded 440 conversations at about VND 15,250 each. Daily reports around the budget reallocation showed about 54 versus 71 conversations per day on the same daily spend; an operational comparison, not a controlled experiment. **Comparable full-month baseline, Jul to Sep:** 6,184 conversations on about VND 192.0M, or about VND 31.0K each; monthly cost ranged from VND 29.7K to 32.1K. These are calculations from rounded monthly figures, not additional results; October is partial and excluded from this baseline.

WHAT I WOULD BRING TO META ROBOTICS

Match the campaign objective to the action that matters (for you: a paid S$30 discovery session, not a click), read cost per result every day, and move budget before adding budget.

Sources: Meta daily exports and monthly summaries, ThreeTrees, 1 Jul to 23 Oct 2026; CTR from the August summary. USD at about VND 26,000.

Case 2 · From form starts to completed registrations

Jewellery brand, Hanoi · Meta Ads lead generation for free membership and workshops · May to October 2026 · my role: Team Lead and owner of the membership funnel

Meta ad → Landing page → Registration form → FluentCRM (UTM, fbclid) → Pixel + Conversions API "Lead" → Workshop / store visit

523
members signed up from May to 7 Oct 2026

USD 2.3 / 7.5
per member: Lead objective (1 to 7 Oct) / blended across all objectives (1 to 8 Oct)

64% vs 3%
form starts that became members: Lead objective vs a custom event campaign (3 to 8 Oct)

645
Meta leads, September to October 2026

A · WHICH OBJECTIVE ACTUALLY PRODUCES MEMBERS

CAMPAIGN, 1 TO 7 OCT 2026	SPEND (VND)	RESULT
Lead objective (free member)	**3.05M**	**51 members**
Sales objective, optimised for custom event "form start"	3.18M	1 member
Messages	2.09M	47 conversations
Traffic	2.12M	1,351 link clicks

SEPARATE OBSERVATION, 3 TO 8 OCT	FORM STARTS	MEMBERS	COMPLETION
Lead objective	**87**	**56**	**64%**
Custom form-start event	113	3	3%

Calculation: VND 3.05M / 51 = about VND 59.8K (USD 2.30) per free member. Completion: 56/87 = 64.4%; 3/113 = 2.7%, rounded above. The tables have different windows; audience and creative differences prevent attributing the gap to objective alone.

After registration: 30/184 members had booked a session by 21 Sep (16.3%, mixed sources, not an ads-only conversion rate). Separately, 53 workshop attendances were recorded by 12 Oct; workshops include free and paid sessions. These are different windows, so they cannot produce a single attendance rate or cost per paying customer. First purchase per member was not measured.

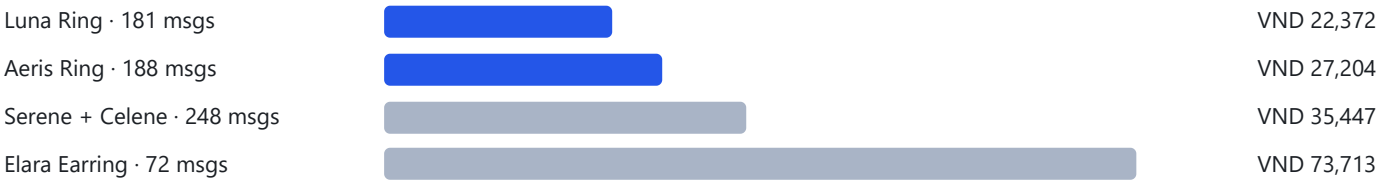

B · TRACKING GAP FOUND BY RECONCILING CRM AND PIXEL

From 15 Oct, Meta reported 0 to 2 registrations a day versus 12 to 15 in the CRM. Reconciliation identified a consent configuration limiting Pixel coverage to about 5% of page views; server side Lead events shared the consent gate. The setup was revised on 21 Oct. Post-change coverage still needed verification, so I do not claim the measurement gap was fully resolved.

TRACKING STACK ON THE SITE

- Meta Pixel: PageView, ViewContent, AddToCart, InitiateCheckout, Lead
- Conversions API for Lead (server side) and a custom conversion
- GA4, Google Ads conversion tag, Microsoft Clarity
- UTM and fbclid stored on each CRM contact

C · PRODUCT TEST, 11 PRODUCTS WITH THEIR OWN CREATIVES, 20 DAYS (MAY 2026), FOUR SHOWN

Across all 11 products, cost per message ranged from ≈ VND 19.8K to 73.7K (3.7×). The weakest, Elara, was flagged for new content.

Sources: TeeTee&Co. ads system logs (Oct 2026) and the May 2026 test report. Ad account run by two media buyers; objectives, budgets and test decisions were mine.

Case 3 · Google Ads first, then the measurement behind it

ThreeTrees and TeeTee&Co., Hanoi · June to October 2026. I led the campaign work and owned the website, tracking and local listings; the retained Google test is small and measures contact actions, not qualified leads.

USD 114
Search and Performance Max total spend, about VND 2.96M

170 clicks
Search, 4,358 impressions, 3.9% CTR

990 clicks
Performance Max, 96,414 impressions

Contact actions
Reported conversions are not verified form leads or customers

GOOGLE ADS TEST FOR THE SISTER BRAND THREETREES, JUNE TO JULY 2026

CAMPAIGN	SPEND	CLICKS	CTR	CONTACT ACTIONS	COST / ACTION
Search: 10 broad-match jewellery keywords	USD 52.27	170	3.9%	125	USD 0.42
Performance Max: local store promotion	USD 61.44	990	1.03%	134	USD 0.46

Calculated CPC: Search USD 52.27 / 170 ≈ USD 0.31; Performance Max USD 61.44 / 990 ≈ USD 0.06. Cheaper clicks do not establish cheaper qualified leads. Reported conversions are contact/directions actions, not unique people or form leads. I would review terms and goals, then prioritise a verified paid booking (page 6). TeeTee&Co. had tracking ready but no paid Google campaign at this snapshot.

SEARCH AND SEO

- Search Console: indexed pages rose from 57 to 83, 9 to 15 Oct 2026; bilingual sitemaps, schema and crawl fixes.
- Lighthouse SEO 92; 33 products submitted to Merchant Center, approval pending in October.

LOCAL SEARCH: GOOGLE MAPS

- Business Profiles for both brands verified on 7 Oct 2026; contact page Maps integration.
- Local keyword research and location content to support store discovery.

MEASUREMENT

- GA4 ecommerce events: view_item, add_to_cart, begin_checkout, purchase, loaded only after cookie consent
- Google Ads purchase conversion through Google for WooCommerce, sent with the GA4 purchase
- Google Customer Reviews switched on; Microsoft Clarity for page behaviour

These are technical implementation outcomes. Organic clicks and conversions from this work were not yet reported when I wrote this, so I do not claim traffic or sales growth.

WHY THIS MATTERS FOR META ROBOTICS

Parents search "robotics class near me" and compare centres on Google Maps before they book. Seven centres means seven profiles, seven local landing pages and conversion tracking that tells you which centre a booking came from.

Sources: Search Console, Merchant Center, Lighthouse and Business Profile records kept in the TeeTee&Co. project notes (Sept to Oct 2026); theme code for GA4 and Google Ads tags.

Career: six industries since 2021

USD 577K
VND 15B of Meta Ads spend managed (approx.)

USD 115K
VND 3B of Google Ads spend managed (approx.)

USD 77K
VND 2B of Shopee and TikTok ads for Miramori, Consolism, Monolife (approx.)

2021 onwards
paid acquisition across six industries; estimates describe scope, not efficiency

Earlier work spans property lead generation through BM Agency and NAC, B2B at Sibetech, travel at Minh An and hospitality for Cixi, plus freelance fashion clients. Developer names refer to projects promoted through agency work, not a claim of direct client contracts. The first table is my approximate career scope; the second lists retained records and explicitly marked recollections.

PERIOD AND INDUSTRY (APPROX.)	META	GOOGLE	SHOPEE, TIKTOK	TOTAL
2021 to 2022 · real estate	USD 423K	USD 96K	none	USD 519K
2023 · B2B tech	USD 23K	USD 12K	none	USD 35K
2023 to 2024 · travel and hospitality	USD 54K	USD 8K	none	USD 62K
2021 to 2026 · fashion ecommerce	USD 65K	none	USD 77K	USD 142K
2026 · retail jewellery (measured)	USD 12K	≈ USD 0.1K	none	USD 12K

CLIENT / EMPLOYER	YEAR	OBJECTIVE	SPEND	RESULT
BM Agency (Hai Phat Land), real estate	2021	Messages, leads	≈ USD 13.3K, 15 May to 26 Aug	226 form leads, 2,837 conversations
BM Agency, Google Display test	2021	Conversions	≈ USD 540, 23 Jun to 13 Jul	7,817 clicks (≈ USD 0.07 each), 43 recorded conversions
Cixi Serviced Apartment	2023 to 24	Messages	Not retained	≈ USD 0.19 per conversation †
Consolism, fashion	2023	Messages, sales	≈ USD 4.5K, 13 accounts	results not retained
S.QEEN, fashion	Oct 2024	Messages	≈ USD 330	148 conversations, ≈ USD 2.2 each

† approximate, from memory; these accounts belonged to employers and clients and closed with each engagement, so no dashboards can be shared.

WHAT THESE EARLIER ACCOUNTS TAUGHT ME

- Real estate (BM Agency): messages are cheap and form leads are not, but quality only shows when sales follow up, so I now track the step after the message.
- Serviced apartments and fashion: Click to Messenger works when someone replies fast; cost per conversation means little without a reply process behind it.
- Small budgets: with a few hundred dollars a month, structure and creative matter more than bidding tricks.

Outside audit and Search plan for Meta Robotics

Hypothesis to verify: website booking events may be under-reported. Public ad creative and page code do not reveal account performance, campaign objectives, budget allocation or server side events. Observations below are dated 23 Oct 2026.

WHAT I CHECKED FROM OUTSIDE, 23 OCT 2026

- **Your live Meta ads:** about 11 active ads on 23 Oct: Open House (Microsoft Forms registration), screen-time concerns (WhatsApp enquiry), and build-and-test learning (Learn More → /screentime.html). Spend and results are not public; Forms tracking needs a separate check.
- **The landing page:** GA4 and Google Ads load on visit; a Google conversion fires on WhatsApp tap. The visible Meta Pixel starts inside that tap handler; form Lead depends on it already being loaded. This suggests a client-side gap, not proof of missing server-side events. Confirm in Events Manager first.
- **Measurement acceptance checks, before changes:** Trace a test enquiry from form to CRM, then a test payment to the booking record. Check consent states, one Lead per valid submit, Pixel/CAPI deduplication and no repeat event on refresh. Verify in GTM Preview, GA4 DebugView and Meta Test Events; keep live tags unchanged until the test passes.

PROPOSED SEARCH PILOT: START NARROW, EXPAND ON EVIDENCE

STAGE	ACTION AND CONDITION	DESTINATION
Launch: brand	Meta Robotics and close variants; separate brand reporting from new demand.	Most relevant brand page
Launch: high intent	Phrase/exact class and local terms. Start with centres that have capacity; group only where offer and economics match.	Matching class / centre page
First offer test	Trial class versus RDA only where each is available; RDA catchments: Novena and Katong.	Offer-specific page
Expand: holidays	Prepare ahead of the next holiday only after dates, capacity and current prices are confirmed.	Holiday programme
Later: DSA / competitions	Separate seasonal tests after the core pilot; no need to launch every theme at once.	Relevant programme
Conversion goal	Verified paid booking as the preferred bidding outcome. Use a validated qualified lead temporarily if paid volume is insufficient; avoid bidding to both funnel stages together.	CRM / payment record
Reconcile weekly	Keep click ID / UTM and one lead ID; join booking and enrolment outcomes to the source. Review unmatched records and duplicates before changing budget.	Centre-level report

Research: Keyword Planner, Singapore, Oct 2025 to Sep 2026, read 23 Oct. “Coding class for kids” and “robotics singapore”: 100 to 1K searches/month; “robotics class singapore”: 10 to 100. Ranges guide a pilot, not a volume forecast. Conversion design reference: Google primary / secondary actions and offline lead stages.

Initial negatives to review: jobs, salary, university, adult courses, toys and kits. Check actual queries before excluding ambiguous terms such as “free”. Review search terms twice a week during the pilot. Meta creative addresses parents; use adult audiences and location relevance, within policy and consent.

CREATIVE TEST BRIEF — PROPOSED, NOT LAUNCHED

- Hypothesis: assessment plus written report appeals to parents unsure where to start. Compare with trial messaging only where both offers run; hold audience and geography constant and use matching offer pages.
- Primary check: qualified enquiry → paid booking; report spend and observation window. Do not declare a winner on CTR alone.
- Confirm current prices, claims and capacity with the team before publishing copy.

DECISIONS BY CONDITION, NOT A FIXED RECIPE

- No reliable conversion yet: fix tracking before changing bidding
- Validated bookings: choose bidding and any CPA target from volume, cost and booking lag, not a calendar date
- Too little data: limit simultaneous tests; agree a loss limit with the team. Pool only compatible offers and catchments, retaining centre reporting

What I would focus on at Meta Robotics

From your public site, the Meta Ad Library, competitor prices and Keyword Planner (seven centres; ages 3 to 16; form / WhatsApp → paid session). I have not seen your ad accounts, so every point is a hypothesis to check there first.

Meta / Google ad → Website form: age, centre → Prefilled WhatsApp → Paid session: trial or assessment → Attended → Enrolled

The number I would manage to: **cost per paid discovery session**, by centre and age group, with enrolment rate as the quality check.

Priority 1

Make the whole chain measurable

Agree a qualified enquiry definition with sales: relevant programme, serviceable centre, valid contact and genuine interest. Trace test enquiries and payments before accepting tracking. Report leads → paid bookings → attended → enrolled by centre and campaign. Prefer a validated paid booking for bidding; retain WhatsApp taps as diagnostics. My production evidence is direct tags, not GTM; the GTM checks on page 6 are a proposed validation method.

Priority 2

Find the waste

Review spend, qualified enquiries and paid bookings by centre and search term. Check capacity, follow-up time and conversion lag before cutting a source with no bookings. Exclude clearly irrelevant traffic and test one correction at a time.

Priority 3

First tests, one variable each

Test age-specific creative and programme proof. At Novena and Katong, test the S$30 Robotics Discovery Assessment with its written report and parent consultation. Keep Trial Class ads separate, with only that offer's verified benefits. Start Google Search with the highest-intent location and class terms.

Priority 4

Decide and plan the holidays

Agree a test budget, observation window and decision rule before launch. Judge cost per paid booking alongside enrolment quality and booking lag. Schedule holiday work after core measurement is dependable; keep the test backlog within the agreed 20 hours.

WEEKLY UPDATE YOU WOULD GET FROM ME

- Cost per stage = total campaign spend for the acquisition cohort / deduplicated outcomes at that stage, including spend that produced no conversion
- Use matching campaign cohorts and windows; show pending outcomes and unknown attribution separately
- Decision: keep, change or hold; evidence and next test
- Tracking checks passed, failures and unresolved gaps

WORKING ARRANGEMENT

- 20 hours a week; proposed hours 8–10 AM and 7–9 PM Singapore time, Monday to Friday; start 2 November 2026.
- Hanoi, GMT+7: one hour behind Singapore, same working day
- Written updates in English; calls by arrangement within agreed overlap
- Proposed weekly allocation: campaigns 8h, analysis 4h, tracking 3h, creative tests 3h, reporting/calls 2h; adjust by agreement

QUESTIONS I WOULD ASK IN OUR FIRST CALL

- What does a paid discovery session cost you today, and how many sessions turn into enrolments, by centre?
- Which centres and age groups have spare capacity, so ads push where seats are open?
- How do enquiries split between the website form, WhatsApp and phone, and how is each tracked?
- How is budget split between Meta and Google now, and what was tried before that did not work?
- What contribution margin and booking-to-enrolment rate should set our acceptable acquisition cost?
