Paid acquisition. Measurable outcomes.

Meta and Google Ads, landing pages, CRM and AI-assisted delivery. Application for the Meta Robotics Performance Marketing Specialist role.

YOUR REQUIREMENT	RELEVANT EVIDENCE	PAGE
Google and Meta ownership	Paid acquisition since 2021; current two-buyer team-lead scope. Reported Search results plus retained campaign history.	2–3; CV
Qualified leads and acquisition cost	Reported 168 qualified enquiries, 84 net paid bookings and 24 net enrolments; media CAC USD 125.	2–3
Improvement without extra spend	14 to 24 enrolments at USD 3,000 media per period; separate documented budget-reallocation decision below.	2
GA4, GTM and Meta Pixel	GA4, Ads tags, Pixel/CAPI and CRM via direct tags; a GTM rollout/QA plan is included as proposed work.	4; 6–7
AI, copy and problem solving	Working personal prototypes, separate reported workflow evaluation, Search brief and creative concepts.	5–6
Independent remote delivery	20 hours/week; SGD 2,000 proposed fee; English written updates and agreed Singapore-time overlap.	7; letter

24 enrolments
Reported net outcome; 84 net paid bookings

USD 125
Media-only CAC; fees/overhead excluded

60 qualified
Reported Search subset; USD 20 per qualified enquiry

2 media buyers
Current team-lead scope across two jewellery brands

HOW TO READ THE EVIDENCE

Pages 2–3: acquisition and Search figures confirmed by me on 26 Oct 2026, in USD; client/period details and source exports are not included. **Pages 4–5:** retained implementation records and personal work samples. **Pages 6–7:** a proposed SGD pilot. Source notes distinguish what was measured, reported or planned.

A DOCUMENTED OPTIMISATION DECISION

At ThreeTrees I corrected a creative/objective mismatch and reallocated existing July budget. Reports showed roughly 54 to 71 daily conversations (about +31%) at equal daily spend; the rebuilt ad recorded 440 conversations. I owned the decision and daily review. This is an observational comparison, separate from the acquisition case on page 2.

Read outcomes on pages 2–3, measurement on page 4 and proposed execution on pages 6–7. USD historical results and SGD future costs are separate.

More enrolments at the same media spend

Lead-to-enrolment campaign · candidate-reported results · currency: USD.

MEASURE	EARLIER PERIOD	LATER PERIOD
Media spend (USD)	3,000	3,000
Received enquiries	180	240
Qualified enquiries	108	168
Net paid bookings	54	84
Attended	42	68
Net enrolments	14	24
Media / qualified enquiry (USD)	27.78	17.86
Media / paid booking (USD)	55.56	35.71
Media / net enrolment (USD)	214.29	125.00

+71.4%
14 to 24 net enrolments

−41.7%
Reduction in media-only CAC

70.0%
168 qualified / 240 enquiries

81.0%
68 attended / 84 net paid bookings

LATER-PERIOD CHANNEL	META	GOOGLE SEARCH	TOTAL
Media (USD)	1,800	1,200	3,000
Enquiry / qualified	160 / 108	80 / 60	240 / 168
Net paid / attended	54 / 44	30 / 24	84 / 68
Net enrolments	15	9	24

REPORTED RECONCILIATION

252 submissions − 12 duplicates = **240 enquiries**; 88 paid bookings − 4 refunds = **84 net paid**; 25 enrolments − 1 cancellation/refund = **24 net enrolments**. Meta and Search totals reconcile to this same reported cohort.

WHAT THE COMPARISON SUPPORTS

Qualified enquiries rose by 55.6% and net enrolments by 71.4% at unchanged media spend. Media-only CAC fell 41.7%. These totals support improved acquisition efficiency; the change log and attribution settings needed to explain the cause are not supplied.

Source: candidate-confirmed figures, 26 Oct 2026; USD. Client/calendar periods and underlying Ads/CRM/payment exports are not supplied. This before/after comparison does not establish causality or profit.

Google Search: quality beyond the click

Candidate-reported Search subset of page 2. Its spend and outcomes are included in the total, not added again.

SEARCH MEASURE	EARLIER PERIOD	LATER PERIOD
Media spend (USD)	1,200	1,200
Impressions	12,000	12,000
Clicks / CTR	480 / 4.0%	600 / 5.0%
CPC (USD)	2.50	2.00

Media / net enrolment (USD)	400.00	133.33

−60%
cost per qualified enquiry

13.3%
80 enquiries / 600 clicks

75.0%
60 qualified / 80 enquiries

9 enrolled
net outcome from Search

INTERPRETATION

The reported gain is not just more clicks: qualification rises from 50% to 75%, while media spend stays at USD 1,200. Nine net enrolments follow 30 net paid bookings. Keyword-level or causal improvement is not inferred from these totals.

HOW I WOULD APPLY THE LESSON

Separate brand and non-brand intent, align the offer with its destination, inspect search terms and use a qualified or paid outcome after validation. Join the source to net payment records before recommending more spend. Page 6 contains the proposed Search setup.

SEPARATE RETAINED GOOGLE RECORD

The June–July 2026 ThreeTrees Search/PMax test used about USD 114 combined; Search recorded 170 clicks at 3.9% CTR. Those conversions were contact/directions actions. They are not the paid bookings in the reported case above and are not relabelled as qualified leads.

Source: candidate-confirmed figures, 26 Oct 2026; USD. Client/calendar periods and underlying Ads/CRM/payment exports are not supplied. This before/after comparison does not establish causality or profit.

Tracking, CRM and completed registrations

Jewellery brand, Hanoi · Meta Ads lead generation for free membership and workshops · May to October 2026 · my role: Team Lead and owner of the membership funnel

Meta ad → Landing page → Registration form → FluentCRM (UTM, fbclid) → Pixel + Conversions API "Lead" → Workshop / store visit

523
members signed up from May to 7 Oct 2026

VND 59.8K
per free member; 51 registrations, VND 3.05M, 1 to 7 Oct

64% vs 3%
form starts that became members: Lead objective vs a custom event campaign (3 to 8 Oct)

30 / 184
members booked by 21 Sep (16.3%); separate mixed-source snapshot

A · WHICH OBJECTIVE ACTUALLY PRODUCES MEMBERS

CAMPAIGN, 1 TO 7 OCT 2026	SPEND (VND)	RESULT
Lead objective (free member)	**3.05M**	**51 members**
Sales objective, optimised for custom event "form start"	3.18M	1 member
Messages	2.09M	47 conversations
Traffic	2.12M	1,351 link clicks

SEPARATE OBSERVATION, 3 TO 8 OCT	FORM STARTS	MEMBERS	COMPLETION
Lead objective	**87**	**56**	**64%**
Custom form-start event	113	3	3%

Calculation: approximately VND 3.05M / 51 = VND 59.8K per free registration. Completion: 56/87 = 64.4%; 3/113 = 2.7%, rounded above. The tables use different windows; audience and creative differences prevent attributing the gap to objective alone.

Downstream context: 30/184 members booked by 21 Sep (16.3%, mixed sources). Separately, 53 attendances were recorded by 12 Oct and Meta reported 645 leads across Sep–Oct. These windows and populations differ; no combined funnel, attendance rate or paid-customer CPA can be calculated. First purchase per member was not measured.

B · TRACKING GAP FOUND BY RECONCILING CRM AND PIXEL

From 15 Oct, Meta reported 0 to 2 registrations a day versus 12 to 15 in the CRM. Reconciliation identified a consent configuration limiting Pixel coverage to about 5% of page views; server side Lead events shared the consent gate. The setup was revised on 21 Oct. Post-change coverage still needed verification, so I do not claim the measurement gap was fully resolved.

TRACKING STACK ON THE SITE

- Meta Pixel: PageView, ViewContent, AddToCart, InitiateCheckout, Lead
- Conversions API for Lead (server side) and a custom conversion
- GA4, Google Ads conversion tag, Microsoft Clarity
- UTM and fbclid stored on each CRM contact

Source: TeeTee&Co. ads system logs and CRM/measurement notes, Oct 2026. Two media buyers operated the account; objectives, budgets and test decisions were mine. Free registrations are not paid customers.

Beyond media buying: AI, web and workflow

I turn marketing requirements into working tools: define the problem, direct AI-assisted implementation, review the output and test the user journey. These samples demonstrate delivery; they do not claim client revenue or autonomous campaign optimisation.

Live prototype
Taste Brief · Claude + Qloo audience research

2 web demos
4 responsive pages across product and service briefs

7-node flow
n8n lead qualification prototype

Human review
I own the brief and acceptance; AI assists the code

AI RESEARCH · TASTE BRIEF

MARKETING PROBLEM	WHAT I BUILT WITH AI	EVIDENCE AND LIMITS
Turn a product and market brief into a podcast shortlist and paid-social hypotheses.	Claude uses Qloo tools to research audiences, compare options and draft briefs. Sources, a tool trace and CSV exports make the output reviewable.	Public prototype and recorded run. 84/84 offline tests passed on 26 Oct; this verifies the tested code paths, not business lift or every recommendation.

Try it: Taste Brief demo → "See a real run now" for the recorded example. Read the source code.

The tool drafts a shortlist and outreach copy; it does not buy ads or send emails. Taste fit does not predict sales. Targeting, claims, supplier availability and test readiness still need human verification.

WEB DELIVERY · TWO DIFFERENT CONVERSION JOURNEYS

SAMPLE	INTERACTION TO INSPECT	WHAT IT DEMONSTRATES
Halo Lamp · product landing page	Choose a product bundle; read the demo confirmation.	Offer hierarchy, responsive layout and a clear purchase CTA. No real checkout.
Northfield Physio · three-page service site	Move from services to contact; submit empty, then valid, sample fields.	Service navigation, pricing structure, accessible labels, validation and success feedback. No message is sent.

Fictional brands, prices and reviews, labelled on every page. AI-assisted design and implementation. These are work samples, not commissioned websites or medical advice.

AUTOMATION · LEAD TRIAGE KIT

Input → decision → response: webhook receives a lead; deterministic checks validate fields and score budget/timing; Claude assesses intent and fit; the workflow combines the scores and returns a hot/warm/cold route.

Checked on 26 Oct: 14 HTTP scenarios passed through real n8n with a local simulated provider, including Header Auth, rejected inputs, malformed replies, HTTP 429/503, disconnect and a 30-second timeout. AI errors return **manual review with no score**, not a cold lead. Test record (JSON). Live-model quality and production use remain unverified.

SEPARATE CANDIDATE-REPORTED WORKFLOW EVALUATION

A separate evaluation I report covers 50 enquiries: 150 minutes manually versus 60 with AI assistance including review, a 60% reduction. First-pass labels agreed on 48/50; two were corrected before action. These figures are candidate-reported, not measured by the prototype tests above; the workflow/version and evaluation log are not supplied in this edition.

A Search pilot and creative brief for Meta Robotics

Proposed work, not past results. RDA offer rechecked on 27 Oct; page-code review on 26 Oct; the ad snapshot remains dated 23 Oct. Account objectives, server-side events and performance need access to verify.

OUTSIDE REVIEW: THREE CHECKS BEFORE SPENDING

- **Separate intent from receipt:** the current booking flow opens a prefilled WhatsApp message. Opening it is not proof it was sent, received or paid. Preserve source/ref codes through to a CRM outcome.
- **Validate the visible code:** the WhatsApp handler loads Pixel and sends a Google conversion. A separate contact-form error branch displays a thank-you message after a failed request. Verify the active flow and account events; code inspection alone is not an end-to-end test.
- **Acceptance:** 24 planned tests cover six scenarios across Meta/Search and desktop/mobile: consent allowed/refused, invalid input, duplicates, unpaid bookings, and payment/refund. A received enquiry gets one CRM record; marketing events require appropriate consent and deduplication. WhatsApp opening stays diagnostic; paid booking requires a matched payment.

PROPOSED SEARCH PILOT: START NARROW, EXPAND ON EVIDENCE

STAGE	ACTION AND CONDITION	DESTINATION
Prepare: brand RDA	Keep brand assessment terms separate and paused until existing coverage is checked; do not claim brand demand as new acquisition.	RDA page
Launch: RDA intent	One non-brand group: phrase/exact robotics-assessment and local discovery terms. Confirm location eligibility and centre capacity.	RDA page
First offer test	Start with RDA at Novena/Katong, subject to capacity. The S$1,200 Search allocation on page 7 funds this narrow test; other offers follow separately.	Offer-specific page
Expand: holidays	Prepare ahead of the next holiday only after dates, capacity and current prices are confirmed.	Holiday programme
Conversion goal	Verified paid booking as the preferred bidding outcome. Use a validated qualified lead temporarily if paid volume is insufficient; avoid bidding to both funnel stages together.	CRM / payment record
Reconcile weekly	Keep click ID / UTM and one lead ID; join booking and enrolment outcomes to the source. Review unmatched records and duplicates before changing budget.	Centre-level report

Research before launch: validate current demand, geography and match types in the account; keep brand, assessment and class intent separate. Record the research date. Conversion design reference: Google primary / secondary actions.

Launch workbook: 12 keyword drafts with launch states, 16 negative phrases and two RSA concepts (28 assets). Review terms twice weekly. Offer checked 27 Oct: Meta Robotics RDA. Drafts are proposed work.

META CREATIVE SAMPLE · DRAFT, NOT LAUNCHED

- **Angle A:** "Where should your child start with robotics?" RDA pairs a 45-minute activity with a 15-minute parent consultation and a personal report. S$30 at Novena or Katong. CTA: Ask about RDA slots.
- **Angle B:** "See how your child tackles a new challenge." Keep the same RDA offer, audience and page; change the opening message only.
- Visual brief: an approved build sequence and report detail. Judge received qualified enquiries and paid bookings, not clicks alone.

SEARCH COPY SAMPLE · DRAFT, NOT LAUNCHED

- **Headlines:** Robotics Assessment / S$30 Discovery Session / Novena & Katong Centres
- **Descriptions:** Explore how your child learns. A personal report and parent consultation included. Book a 60-minute RDA at Novena or Katong. Ask our team about available sessions.
- **Destination:** /rda.html; phrase/exact robotics assessment terms, eligible locations only. Keep trial-class terms in a separate offer group.
- Confirm offer, capacity and copy with the team. Page 7 uses a blended paid-CPA working target of S$45; set platform bidding targets only after validating outcomes and lag.

Can paid discovery sessions produce viable enrolment acquisition?

Decision brief · A proposed work sample for the Performance Marketing Specialist role

RECOMMENDATION

Start with one Robotics Discovery Assessment offer and two centres, subject to capacity. Validate economics and measurement first; release a capped Meta and Search test only after sign-off. Judge paid bookings and enrolments alongside qualified leads.

S$6,000	S$3,000	70 / 18	S$1,040
Total pilot funding cap	Media within that total	Net paid bookings / enrolments: base targets	Base remainder after 20% reserve, before overhead

Budget: S$1,500 Meta prospecting + S$300 eligible remarketing + S$1,200 Search; S$2,000 management (80h), S$300 later follow-up (12h), S$700 creative/tools/fees allowance. Reallocate ineligible remarketing within the same cap.

Base funnel: 200 enquiries → 140 qualified → 74 paid bookings less 4 refunds → 70 net paid → 56 attended → 18 net enrolments. Qualified means contactable, eligible and suitable for the centre/time, with clear paid interest. These are planning assumptions, not market forecasts.

THE ASSUMPTION THAT CHANGES THE DECISION

Hold 70 net paid bookings at S$10 contribution each, S$6,000 total costs and a 20% contribution reserve constant. Vary incremental 90-day course contribution after variable costs and any RDA credit:

COURSE CONTRIBUTION	ENROLMENTS TO BREAK EVEN	ENROLMENTS FOR 10% COST BUFFER	REMAINDER AT 18
S$300	23	26	-S$1,120
S$450	16	17	S$1,040
S$600	12	13	S$3,200

Not tuition, net profit or month-one cash. Confirm margins with finance; fixed overhead excluded. S$600 is a sensitivity case, not the selected input. At the S$450 base, 16 net enrolments break even; 17 provide the 10% buffer.

STAGE / PROPOSED OWNER	DELIVERABLE AND DECISION
2-6 Nov; preflight 9 Nov · Long + centre/finance/technical owners	Validate margin, demand and 96 gross-booking places; baseline CRM/payment sources; document 24 tracking tests, publish/rollback and live preflight. If prerequisites fail, delay media.
9-29 Nov · Long; centre owns sales follow-up	Release weekly media caps S$900 / S$1,000 / S$1,100. Test two creative angles and Search intent. Friday update: spend, quality, cohort age, decisions and next test. Stop affected spend for tracking or payment failures.
30 Nov / 29 Dec / 29 Mar · Long + finance	Reconcile spend, close cohort outcomes, then close the latest 90-day contribution window. Match CRM to payments/refunds; pending or unknown outcomes stay separate.

Working agreement: 20h/week, Mon-Fri 08:00-10:00 and 19:00-21:00 SGT; 12 follow-up hours across three later checkpoints. Company owners cover customer responses and system alerts outside those hours. AI assists drafts and checks; I review changes before release.

Scale only after a mature cohort: at least 30 net paid bookings, confirmed margins, paid CPA ≤S$45, attendance ≥80%, enrolment/attendance ≥30%, at least 10% cost buffer and available capacity. These are proposed operating thresholds, not statistical guarantees. Supporting execution plan/workbook: v2, 26 Oct 2026. Editable workbook: economics, QA and Search launch.
