Campaign evidence for Meta Robotics

I connect Meta acquisition with landing pages, CRM and measurement. The strongest case is a budget decision; the Google records show a smaller test. Pages 6 to 7 turn the research into a proposed campaign brief. View online

YOU ASK FOR	MY EVIDENCE	WHERE
2+ years managing Meta and Google Ads	Paid acquisition since 2021. Meta evidence is strongest; Search and Performance Max records here, earlier Display records in the CV.	Pages 2 to 4; CV
Lead generation, not awareness	51 free registrations in October; 226 form leads in retained 2021 records. A separate CRM snapshot follows members through to booking.	Pages 2 to 3; CV
GA4, GTM and Meta Pixel tracking	GA4, Ads tags, Pixel and CAPI Lead implemented through direct tags. CRM reconciliation found a tracking gap. Production GTM experience is not established.	Pages 3 to 4
Budget optimisation, data into action	Roughly 54 to 71 daily conversations at unchanged daily spend after reallocation: about +31%, observational. Full-month context on page 2.	Page 2
Landing pages, CRM, SEO, AI	Landing page, CRM and email ownership; SEO implementation. Taste Brief, two web demos and an n8n prototype show AI-assisted delivery.	Pages 3 to 5
Proactive, remote, English	Outside audit, draft copy and Search pilot for your business. IELTS 6.5; UK degree in English (2:1); 20 hours/week from GMT+7.	Pages 6 to 7

HOW TO READ THE FIGURES

Outcomes are labelled at the stage actually measured: conversations, free registrations or bookings. They are not interchangeable with paying customers. Figures retain their dates and sources; pages 6 to 7 are proposed work.

SELECTED EVIDENCE

7,479
Messenger conversations at about USD 1.21 each, ThreeTrees, Jul to 23 Oct 2026

51 registrations
VND 3.05M spend, about USD 2.30 per free member, 1 to 7 Oct 2026

About +31%
54 to 71 conversations/day at the same daily spend; operational comparison, Case 1

CONTENTS

Page 2 Case 1 · More conversations at the same daily spend
Page 3 Case 2 · Form starts to completed registrations
Page 4 Case 3 · Google Ads and measurement
Page 5 AI, web and automation · working samples
Page 6 Search pilot and creative brief for Meta Robotics
Page 7 First working cycle and commercial decision rule

USD equivalents use about VND 26,000. Campaign figures come from retained platform/CRM records; derived metrics are identified. Original records remain private.

Case 1 · More conversations at the same daily spend

Silver jewellery retailer, Hanoi · Meta Ads, Click to Messenger lead generation · July to October 2026 · my role: Team Lead (objectives, budget, test decisions, daily reporting) with two media buyers

About +31%
54 to 71 conversations/day around the July reallocation; observational

USD 9.1K
Meta spend, Jul to 23 Oct; comparable Jul–Sep monthly spend

USD 1.21
average cost per conversation

7,479
Messenger conversations, 1 Jul to 23 Oct; monthly context below

GOAL AND SETUP

Drive store visits and sales through Messenger conversations that sales staff close. Campaigns: Messages (main), Engagement for a wedding fair and branding, Traffic. Most store invoices come from customers who walk in, so ROAS cannot be attributed to ads; I manage on cost per conversation and check store sales alongside.

WHAT THE DAILY REPORT SHOWED

Daily reports flagged a chat-led creative running under Sales and then Traffic objectives. I redirected it to Messages and reallocated the existing budget with the two media buyers. The table preserves the unequal observation windows; this was an operational correction, not an A/B experiment.

SAME CREATIVE, THREE OBJECTIVES

OBJECTIVE	DATES	SPEND (VND)	CONVERSATIONS	COST EACH
Sales	9 Jul	164,595	0	none
Traffic	from 10 Jul	765,128	0 (48 clicks)	none
Messages	**from 11 Jul**	**6,710,025**	**440**	**≈ 15,250**

CONVERSATIONS A MONTH, JULY TO OCTOBER 2026

Decision and observed result: correct the objective, then reallocate the existing budget. Daily reports showed roughly 54 versus 71 conversations at the same daily spend: (71 / 54 − 1) × 100 ≈ **31% more**. The rebuilt ad recorded 440 conversations at about VND 15,250 each. Different periods and other changes prevent a causal or lead-quality claim.

WHAT I WOULD BRING TO META ROBOTICS

Match the campaign objective to the action that matters (for you: a paid S$30 discovery session, not a click), read cost per result every day, and move budget before adding budget.

Sources: retained Meta daily exports and monthly summaries, ThreeTrees, 1 Jul to 23 Oct 2026. USD at about VND 26,000; daily rates and monthly spend are rounded.

Case 2 · From form starts to completed registrations

Jewellery brand, Hanoi · Meta Ads lead generation for free membership and workshops · May to October 2026 · my role: Team Lead and owner of the membership funnel

Meta ad → Landing page → Registration form → FluentCRM (UTM, fbclid) → Pixel + Conversions API "Lead" → Workshop / store visit

523
members signed up from May to 7 Oct 2026

USD 2.30
per free member; 51 registrations, VND 3.05M, 1 to 7 Oct

64% vs 3%
form starts that became members: Lead objective vs a custom event campaign (3 to 8 Oct)

30 / 184
members booked by 21 Sep (16.3%); separate mixed-source snapshot

A · WHICH OBJECTIVE ACTUALLY PRODUCES MEMBERS

CAMPAIGN, 1 TO 7 OCT 2026	SPEND (VND)	RESULT
Lead objective (free member)	**3.05M**	**51 members**
Sales objective, optimised for custom event "form start"	3.18M	1 member
Messages	2.09M	47 conversations
Traffic	2.12M	1,351 link clicks

SEPARATE OBSERVATION, 3 TO 8 OCT	FORM STARTS	MEMBERS	COMPLETION
Lead objective	**87**	**56**	**64%**
Custom form-start event	113	3	3%

Calculation: VND 3.05M / 51 = about VND 59.8K (USD 2.30) per free member. Completion: 56/87 = 64.4%; 3/113 = 2.7%, rounded above. The tables have different windows; audience and creative differences prevent attributing the gap to objective alone.

Downstream context: 30/184 members booked by 21 Sep (16.3%, mixed sources). Separately, 53 attendances were recorded by 12 Oct and Meta reported 645 leads across Sep–Oct. These windows and populations differ; no combined funnel, attendance rate or paid-customer CPA can be calculated. First purchase per member was not measured.

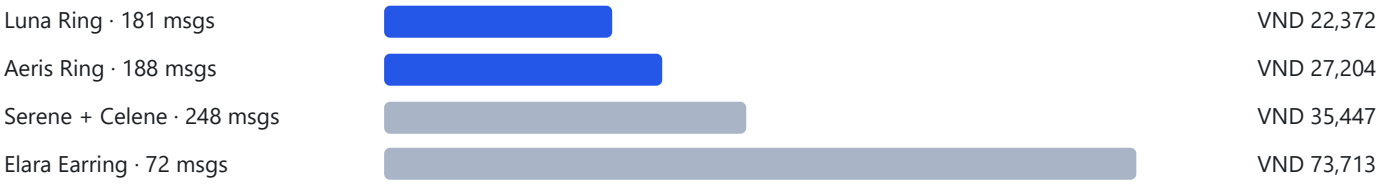

B · TRACKING GAP FOUND BY RECONCILING CRM AND PIXEL

From 15 Oct, Meta reported 0 to 2 registrations a day versus 12 to 15 in the CRM. Reconciliation identified a consent configuration limiting Pixel coverage to about 5% of page views; server side Lead events shared the consent gate. The setup was revised on 21 Oct. Post-change coverage still needed verification, so I do not claim the measurement gap was fully resolved.

TRACKING STACK ON THE SITE

- Meta Pixel: PageView, ViewContent, AddToCart, InitiateCheckout, Lead
- Conversions API for Lead (server side) and a custom conversion
- GA4, Google Ads conversion tag, Microsoft Clarity
- UTM and fbclid stored on each CRM contact

C · PRODUCT TEST, 11 PRODUCTS WITH THEIR OWN CREATIVES, 20 DAYS (MAY 2026), FOUR SHOWN

Across all 11 products, cost per message ranged from ≈ VND 19.8K to 73.7K (3.7×). The weakest, Elara, was flagged for new content.

Sources: TeeTee&Co. ads system logs (Oct 2026) and the May 2026 test report. Ad account run by two media buyers; objectives, budgets and test decisions were mine.

Case 3 · Google campaigns and measurement judgement

ThreeTrees and TeeTee&Co., Hanoi · June to October 2026. I led the campaign work and owned the website, tracking and local listings; the retained Google test is small and measures contact actions, not qualified leads.

USD 114
Search and Performance Max total spend, about VND 2.96M

170 clicks
Search, 4,358 impressions, 3.9% CTR

990 clicks
Performance Max, 96,414 impressions

Contact actions
Reported conversions are not verified form leads or customers

GOOGLE ADS TEST FOR THE SISTER BRAND THREETREES, JUNE TO JULY 2026

CAMPAIGN	SPEND	CLICKS	CTR	CONTACT ACTIONS	COST / ACTION
Search: 10 broad-match jewellery keywords	USD 52.27	170	3.9%	125	USD 0.42
Performance Max: local store promotion	USD 61.44	990	1.03%	134	USD 0.46

Calculated CPC: Search USD 52.27 / 170 ≈ USD 0.31; Performance Max USD 61.44 / 990 ≈ USD 0.06. Cheaper clicks do not establish cheaper qualified leads. Reported conversions are contact/directions actions, not unique people or form leads. I would review terms and goals, then prioritise a verified paid booking (page 6). TeeTee&Co. had tracking ready but no paid Google campaign at this snapshot.

SEARCH AND SEO

- Search Console: indexed pages rose from 57 to 83, 9 to 15 Oct 2026; bilingual sitemaps, schema and crawl fixes.
- Lighthouse SEO 92; 33 products submitted to Merchant Center, approval pending in October.

LOCAL SEARCH: GOOGLE MAPS

- Business Profiles for both brands verified on 7 Oct 2026; contact page Maps integration.
- Local keyword research and location content to support store discovery.

MEASUREMENT

- GA4 ecommerce events: view_item, add_to_cart, begin_checkout, purchase, loaded only after cookie consent
- The retained 17 Oct setup fired GA4 purchase and Ads conversion on order placement, including unpaid orders. These events do not establish paid sales or ROAS.
- Before using payment outcomes for bidding: reconcile order status, payment and a unique transaction ID; exclude unpaid orders and duplicates.

These are technical implementation outcomes. Organic clicks and conversions from this work were not yet reported when I wrote this, so I do not claim traffic or sales growth.

WHY THIS MATTERS FOR META ROBOTICS

Parents search "robotics class near me" and compare centres on Google Maps before they book. Seven centres means seven profiles, seven local landing pages and conversion tracking that tells you which centre a booking came from.

Sources: Search Console, Merchant Center, Lighthouse and Business Profile records kept in the TeeTee&Co. project notes (Sept to Oct 2026); theme code for GA4 and Google Ads tags.

Beyond media buying: AI, web and workflow

I turn marketing requirements into working tools: define the problem, direct AI-assisted implementation, review the output and test the user journey. These samples demonstrate delivery; they do not claim client revenue or autonomous campaign optimisation.

Live prototype
Taste Brief · Claude + Qloo audience research

2 web demos
4 responsive pages across product and service briefs

7-node flow
n8n lead qualification prototype

Human review
I own the brief and acceptance; AI assists the code

AI RESEARCH · TASTE BRIEF

MARKETING PROBLEM	WHAT I BUILT WITH AI	EVIDENCE AND LIMITS
Turn a product and market brief into a podcast shortlist and paid-social hypotheses.	Claude uses Qloo tools to research audiences, compare options and draft briefs. Sources, a tool trace and CSV exports make the output reviewable.	Public prototype and recorded run. 84/84 offline tests passed on 26 Oct; this verifies the tested code paths, not business lift or every recommendation.

Try it: Taste Brief demo → "See a real run now" for the recorded example. Read the source code.

The tool drafts a shortlist and outreach copy; it does not buy ads or send emails. Taste fit does not predict sales. Targeting, claims, supplier availability and test readiness still need human verification.

WEB DELIVERY · TWO DIFFERENT CONVERSION JOURNEYS

SAMPLE	INTERACTION TO INSPECT	WHAT IT DEMONSTRATES
Halo Lamp · product landing page	Choose a product bundle; read the demo confirmation.	Offer hierarchy, responsive layout and a clear purchase CTA. No real checkout.
Northfield Physio · three-page service site	Move from services to contact; submit empty, then valid, sample fields.	Service navigation, pricing structure, accessible labels, validation and success feedback. No message is sent.

Fictional brands, prices and reviews, labelled on every page. AI-assisted design and implementation. These are work samples, not commissioned websites or medical advice.

AUTOMATION · LEAD TRIAGE KIT

Input → decision → response: webhook receives a lead; deterministic checks validate fields and score budget/timing; Claude assesses intent and fit; the workflow combines the scores and returns a hot/warm/cold route.

Checked on 26 Oct: 14 HTTP scenarios passed through real n8n with a local simulated provider, including Header Auth, rejected inputs, malformed replies, HTTP 429/503, disconnect and a 30-second timeout. AI errors return **manual review with no score**, not a cold lead. Test record (JSON). Live-model quality and production use remain unverified.

HOW THIS SUPPORTS PERFORMANCE MARKETING

Campaign work shows acquisition and measurement; these projects show I can turn the next operational bottleneck into a testable tool. My role is marketing and system ownership, with AI-assisted delivery. I do not present prototype tests as revenue, time saved or production reliability.

A Search pilot and creative brief for Meta Robotics

Proposed work, not past results. Public pages were checked on 26 Oct; the ad snapshot remains dated 23 Oct. Account objectives, server-side events and performance need access to verify.

OUTSIDE REVIEW: THREE CHECKS BEFORE SPENDING

- **Separate intent from receipt:** the current booking flow opens a prefilled WhatsApp message. Opening it is not proof it was sent, received or paid. Preserve source/ref codes through to a CRM outcome.
- **Validate the visible code:** the WhatsApp handler loads Pixel and sends a Google conversion. A separate contact-form error branch displays a thank-you message after a failed request. Verify the active flow and account events; code inspection alone is not an end-to-end test.
- **Acceptance:** six checks cover consent allowed/refused, invalid input, duplicate submit, refresh and unpaid orders. A received enquiry gets one CRM record; marketing events require appropriate consent and deduplication. WhatsApp opening stays diagnostic; paid booking requires a matched payment.

PROPOSED SEARCH PILOT: START NARROW, EXPAND ON EVIDENCE

STAGE	ACTION AND CONDITION	DESTINATION
Launch: brand	Meta Robotics and close variants; separate brand reporting from new demand.	Most relevant brand page
Launch: high intent	Phrase/exact class and local terms. Start with centres that have capacity; group only where offer and economics match.	Matching class / centre page
First offer test	RDA at Novena/Katong; Trial Class at confirmed centres. Compare messaging within the same offer before testing different offers.	Offer-specific page
Expand: holidays	Prepare ahead of the next holiday only after dates, capacity and current prices are confirmed.	Holiday programme
Conversion goal	Verified paid booking as the preferred bidding outcome. Use a validated qualified lead temporarily if paid volume is insufficient; avoid bidding to both funnel stages together.	CRM / payment record
Reconcile weekly	Keep click ID / UTM and one lead ID; join booking and enrolment outcomes to the source. Review unmatched records and duplicates before changing budget.	Centre-level report

Research: Keyword Planner, Singapore, Oct 2025 to Sep 2026, read 23 Oct. “Coding class for kids” and “robotics singapore”: 100 to 1K searches/month; “robotics class singapore”: 10 to 100. Ranges guide a pilot, not a volume forecast. Conversion design reference: Google primary / secondary actions and offline lead stages.

Initial negatives: jobs, salary, university, adult courses, toys and kits. Review actual search terms twice weekly. Offer details rechecked 26 Oct: Meta Robotics RDA. Drafts above are work samples, not performance claims.

META CREATIVE SAMPLE · DRAFT, NOT LAUNCHED

- **Angle A:** “Where should your child start with robotics?” RDA pairs a 45-minute activity with a 15-minute parent consultation and a personal report. S$30 at Novena or Katong. CTA: Ask about RDA slots.
- **Angle B:** “See how your child tackles a new challenge.” Keep the same RDA offer, audience and page; change the opening message only.
- Visual brief: an approved build sequence and report detail. Judge received qualified enquiries and paid bookings, not clicks alone.

SEARCH COPY SAMPLE · DRAFT, NOT LAUNCHED

- **Headlines:** Robotics Assessment / S$30 Discovery Session / Novena & Katong Centres
- **Descriptions:** Explore how your child learns. A personal report and parent consultation included. Book a 60-minute RDA at Novena or Katong. Ask our team about available sessions.
- **Destination:** /rda.html; phrase/exact robotics assessment terms, eligible locations only. Keep trial-class terms in a separate offer group.
- Confirm offer, capacity and copy with the team. Do not add a CPA target until conversion quality and lag are understood.

How I would run the first working cycle

A proposed operating plan for seven centres, within 20 hours/week. Confirm access, sales ownership, capacity and the commercial baseline before launch.

Meta / Google ad → Website form: age, centre → Prefilled WhatsApp → Paid session: trial or assessment → Attended → Enrolled

Operating metric: cost per paid discovery session, by centre. **Business checks:** attendance, enrolment and contribution after delivery costs; a S$30 booking is not S$30 profit.

Priority 1

Make the whole chain measurable

Agree a qualified enquiry: relevant age/programme, serviceable centre, valid contact and genuine interest. Keep WhatsApp opens separate from received messages. Join enquiry, payment and enrolment with one record ID. Validate consent and deduplication before using an event for bidding.

Priority 2

Find the waste

Review spend, qualified enquiries and paid bookings by centre and search term. Check capacity, follow-up time and conversion lag before cutting a source with no bookings. Exclude clearly irrelevant traffic and test one correction at a time.

Priority 3

First tests, one variable each

Start with one offer and one creative variable. Use the draft RDA hooks on page 6 where capacity allows; keep the Trial Class offer separate. Search starts with high-intent class/location terms, matched to the right page.

Priority 4

Decide and plan the holidays

Agree a test budget, observation window and decision rule before launch. Judge cost per paid booking alongside enrolment quality and booking lag. Schedule holiday work after core measurement is dependable; keep the test backlog within the agreed 20 hours.

WEEKLY UPDATE YOU WOULD GET FROM ME

- Media cost per stage = campaign spend / deduplicated outcomes from the same acquisition cohort; include non-converting spend. Report contract and creative costs separately for fully loaded CAC.
- Use matching campaign cohorts and windows; show pending outcomes and unknown attribution separately
- Decision: keep, change or hold; evidence and next test
- Tracking checks passed, failures and unresolved gaps

WORKING ARRANGEMENT

- 20 hours a week; proposed hours 8–10 AM and 7–9 PM Singapore time, Monday to Friday; start 2 November 2026.
- Hanoi, GMT+7: one hour behind Singapore, same working day
- Written updates in English; calls by arrangement within agreed overlap
- Proposed weekly allocation: campaigns 8h, analysis 4h, tracking 3h, creative tests 3h, reporting/calls 2h; adjust by agreement

COMMERCIAL DECISION RULE AND FIRST-CYCLE DELIVERABLES

- **CPA ceiling:** net contribution from a discovery session + observed enrolment probability × net contribution from a course − an agreed risk reserve. Use a consistent horizon and account for refunds; the S$30 price alone cannot set the target.
- **Deliver:** source-to-booking baseline, six-check validation record, two draft creative angles, one narrow Search pilot and a weekly keep/change/hold decision.
- **Sequence:** measurement and baseline first; launch after approval and readiness. Work stays within 20 hours/week; agree response expectations outside scheduled hours.
