Your job description, point by point

What you ask for, the evidence in this portfolio, and where to find it. Online version with the same figures: longtt-marketing.github.io/portfolio

YOU ASK FOR	MY EVIDENCE	WHERE
2+ years hands-on with Meta and Google Ads	Meta campaigns since 2021, ≈ USD 25k of documented spend. Google is smaller: a ≈ USD 114 Search and Performance Max test (2026) and ≈ USD 540 of Display (2021). I do not claim equal depth on both	Pages 2 – 5
Lead generation, not awareness	Click-to-Messenger and lead-form campaigns: −25% cost per conversation; 64% vs 3% form completion by objective	Pages 2 – 3
GA4, GTM and Meta Pixel tracking	GA4 e-commerce events, Google Ads conversion tag, Pixel and Conversions API Lead; a tracking gap found by reconciling CRM and Pixel. Tags in site code: no GTM container in production yet	Pages 3 – 4
Budget optimisation, data into action	Budget moved on cost per conversation and per member; daily report caught a mis-set objective in two days	Page 2
Landing pages, CRM, SEO, AI	Membership funnel I own (523 members); Search Console, schema and Business Profiles; AI for research, copy and checks	Pages 3 – 4
Proactive, remote, English	An outside audit of your live ads and landing page before being asked; UK degree taught in English (2:1); GMT+7	Pages 6 – 7

GAPS I STATE UP FRONT

My Google Ads spend is small (≈ USD 650 across 2021 and 2026), I have not yet run WhatsApp ads, and my funnels are measured to sign-up, session booking and attendance, not yet to first purchase.

HEADLINE RESULTS

−25%
cost per Messenger conversation at the same daily spend, ThreeTrees, Jul 2026

64% vs 3%
of form starts became members: Lead objective vs a custom-event campaign, Oct 2026

523
members by 7 Oct 2026 through a sign-up funnel I own end to end

11
of your live Meta ads and their landing page checked from outside, 23 Oct 2026

USD at about VND 26,000. Every figure in this portfolio comes from ad-platform exports, CRM records or my own records where marked.

Case 1 · ThreeTrees: reading the daily report, 25% cheaper conversations

Silver jewellery retailer, Hanoi · Meta Ads, Click-to-Messenger lead generation · July 2026 · my role: Team Lead (objectives, budget, test decisions, daily reporting) with two media buyers

USD 2.2k
Meta spend, 1–28 July (VND 57.8M)

1,811
Messenger conversations started

USD 1.14
per conversation on message campaigns (VND 29.5k; VND 53.5M of the spend)

1.32%
link CTR on message campaigns, 1–27 Jul · CPC VND 5,426

GOAL AND SETUP

Drive store visits and sales through Messenger conversations that sales staff close. Campaigns: Messages (main), Engagement for a wedding fair and branding, Traffic. Most store invoices are walk-in sales, so ROAS cannot be attributed to ads; I manage on cost per conversation and check store sales alongside.

WHAT THE DAILY REPORT SHOWED

Our team launched a new July creative under a Sales objective (one day, VND 164,595, 0 messages) and then Traffic (VND 765,128, 48 clicks, 0 messages). The daily report caught our own mismatch within two days: the creative was built to start a chat, so it was rebuilt as a Messages ad and became the best performer of the month.

SAME CREATIVE, THREE OBJECTIVES

OBJECTIVE	DATES	SPEND (VND)	CONVERSATIONS	COST EACH
Sales	9 Jul	164,595	0	–
Traffic	from 10 Jul	765,128	0 (48 clicks)	–
Messages	**from 11 Jul**	**6,710,025**	**440**	**≈ 15,250**

RESULT FOR ALL MESSAGE CAMPAIGNS

After moving the creative to a Messages objective and shifting budget to it (and flagging an Oval Cut campaign at ≈ VND 98,000 per conversation for a new creative), cost per conversation fell by about 25% while daily spend stayed at about VND 1.9M. Conversations per day rose from about 54 to about 71. Most of the gain came from that one creative: the other message campaigns improved about 7% (to ≈ VND 33,100). The two windows leave out 11 Jul, the switch day, so they add up to less than the monthly total. This is a before-and-after observation, not a controlled test.

WHAT I WOULD BRING TO META ROBOTICS

Match the campaign objective to the action that matters (for you: a paid S$30 discovery session, not a click), read cost per result every day, and move budget before adding budget.

Source: 28 daily Meta exports and daily reports, ThreeTrees, July 2026 (period totals computed from the daily rows); CTR and CPC from the monthly summary for 1–27 July. USD at about VND 26,000.

Case 2 · TeeTee&Co.: optimising for the sign-up, not the click

Jewellery brand, Hanoi · Meta Ads lead generation for free membership and workshops · May – October 2026 · my role: Team Lead and owner of the membership funnel

Meta ad → Landing page → Sign-up form → FluentCRM (UTM, fbclid) → Pixel + Conversions API "Lead" → Workshop / store visit

523
members signed up by 7 Oct 2026

USD 2.3 / 7.5
per member: Lead objective (1–7 Oct) / blended across all objectives (1–8 Oct)

64% vs 3%
form starts that became members: Lead objective vs a custom-event campaign (3–8 Oct)

61 / 65
members vs plan, 1–8 Oct, on VND 11.95M (plan 11.84M)

A · WHICH OBJECTIVE ACTUALLY PRODUCES MEMBERS

CAMPAIGN, 1–7 OCT 2026	SPEND (VND)	RESULT	FORM STARTS → MEMBERS
Lead objective (free member)	**3.05M**	**51 members**	**87 → 56 (64%)***
Sales objective, optimised for custom event "form start"	3.18M	1 member	113 → 3 (3%)*
Messages	2.09M	47 conversations	–
Traffic	2.12M	1,351 link clicks	–

* form-start comparison measured 3–8 Oct, a slightly different window from the spend rows (1–7 Oct), which is why 56 and 51 differ. Lesson: optimise for the completed sign-up, not an earlier step; the algorithm finds people who start forms, not people who finish them.

After the sign-up: members are invited to workshops (some free, some paid). On 21 Sep 2026, 30 of the 184 members to that date had booked a session (16%), not all from ads. Separately, staff had recorded 53 workshop check-ins by 12 Oct; attendees move into a post-visit email journey. First purchase per member is not yet measured, so I do not claim a cost per paying customer.

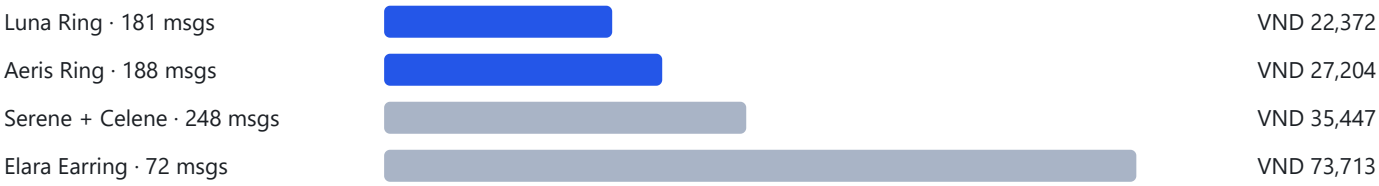

B · TRACKING GAP FOUND BY RECONCILING CRM AND PIXEL

From 15 Oct, sign-ups reported to Meta dropped to 0–2 a day while the CRM showed 12–15. Reconciling the two, we traced it to the cookie-consent set-up blocking the Pixel: Meta saw only about 5% of page views, so the Lead campaign was learning from almost no signal. Server-side Lead events were gated by the same consent check, so they could not fill the gap. On 21 Oct the Pixel and server-side event set-up was revised; coverage after the change is still being checked. Lesson: reconcile platform events against the CRM every day, not every week.

TRACKING STACK ON THE SITE

- Meta Pixel: PageView, ViewContent, AddToCart, InitiateCheckout, Lead
- Conversions API for Lead (server side) and a custom conversion
- GA4, Google Ads conversion tag, Microsoft Clarity
- UTM and fbclid stored on each CRM contact

C · PRODUCT TEST, 11 PRODUCTS WITH THEIR OWN CREATIVES, 20 DAYS (MAY 2026), FOUR SHOWN

Across all 11 products, cost per message ranged from ≈ VND 19.8k to 73.7k (3.7×). The weakest, Elara, was flagged for new content.

Sources: TeeTee&Co. ads system logs (Oct 2026) and the May 2026 test report. Ad account run by two media buyers; objectives, budgets and test decisions were mine.

Case 3 · Google for ThreeTrees and TeeTee&Co.: Search, Maps and measurement

Jewellery brand, Hanoi · teeteeco.com (WordPress, Vietnamese and English) · September – October 2026 · my role: owner of the website, tracking and local listings

57 → 83
pages indexed in Google, 9 → 15 Oct 2026 (Search Console)

92
Lighthouse SEO score; mobile performance 79–95 across 8 pages

33 / 33
products submitted to Merchant Center (approval pending in Oct)

2
Google Business Profiles verified (TeeTee&Co. created new, ThreeTrees)

SEARCH AND SEO

- Search Console verified; Vietnamese and English sitemaps submitted (72 + 72 pages); crawl errors fixed
- Store, Product, Breadcrumb, Collection and Article schema with return and shipping details; hreflang and canonical tags; image sitemap for 117 product images
- Keyword research: 64 keywords in a 5-pillar topic map; 20 blog posts rewritten in both languages

LOCAL SEARCH: GOOGLE MAPS

- TeeTee&Co. profile created with 19 photos and logo, verified on 7 Oct 2026
- ThreeTrees store profile verified the same day
- Map embedded on the contact page; 60 local-search keywords researched for ThreeTrees

MEASUREMENT

- GA4 e-commerce events: view_item, add_to_cart, begin_checkout, purchase, loaded only after cookie consent
- Google Ads purchase conversion through Google for WooCommerce, sent with the GA4 purchase
- Google Customer Reviews switched on; Microsoft Clarity for on-page behaviour

GOOGLE ADS TEST FOR THE SISTER BRAND THREETREES, JUNE – JULY 2026

CAMPAIGN	SPEND	CLICKS	CTR	CONV.	PER CONV.
Search, 10 broad-match jewellery keywords	USD 52	170	3.9%	125	USD 0.42
Performance Max, local store visits	USD 61	990	1.0%	134	USD 0.46

Conversions are Google's "contacts" and "get directions" goals, not form leads: 125 such actions from 170 Search clicks means engagement, not verified leads, so both the search terms and the goal set-up needed review. For you I would make them secondary and put the paid booking first (page 6). TeeTee&Co. has tracking ready but no paid Google campaign yet.

These are technical implementation outcomes. Organic clicks and conversions from this work were not yet reported when I wrote this, so I do not claim traffic or sales growth.

WHY THIS MATTERS FOR META ROBOTICS

Parents search "robotics class near me" and compare centres on Google Maps before they book. Seven centres means seven profiles, seven local landing pages and conversion tracking that tells you which centre a booking came from.

Sources: Search Console, Merchant Center, Lighthouse and Business Profile records kept in the TeeTee&Co. project notes (Sept – Oct 2026); theme code for GA4 and Google Ads tags.

Earlier campaigns, 2021 – 2024

CLIENT / EMPLOYER	YEAR	OBJECTIVE	SPEND	RESULT
BM Agency (Hai Phat Land), real estate	2021	Messages, leads	≈ USD 13.3k, 15 May – 26 Aug	226 form leads, 2,837 conversations
BM Agency, Google Display test	2021	Conversions	≈ USD 540, 23 Jun – 13 Jul	7,817 clicks (≈ USD 0.07 each), 43 recorded conversions
Cixi Serviced Apartment	2023 – 24	Messages	–	≈ USD 0.19 per conversation †
Consolism & Monolife, fashion	2023	Messages, sales	≈ USD 4.5k, 13 accounts	results not retained
S.QEEN, fashion	Oct 2024	Messages	≈ USD 330	148 conversations, ≈ USD 2.2 each

† approximate, from memory; these accounts belonged to employers and clients and closed with each engagement, so no dashboards can be shared.

WHAT THESE EARLIER ACCOUNTS TAUGHT ME

- Real estate (BM Agency): messages are cheap and form leads are not, but quality only shows when sales follow up, so I now track the step after the message.
- Serviced apartments and fashion: Click-to-Messenger works when someone replies fast; cost per conversation means little without a reply process behind it.
- Small budgets: with a few hundred dollars a month, structure and creative matter more than bidding tricks.

Outside audit and Search plan for Meta Robotics

From your website, the Meta Ad Library and Google Keyword Planner (Singapore), read 23 Oct 2026. Without access to your accounts, budgets and bids are set in week 1 from your real numbers.

WHAT I CHECKED FROM OUTSIDE, 23 OCT 2026

- **Your live Meta ads:** the Ad Library showed about 11 active ads in Singapore on 23 Oct, start dates 19 – 20 Oct (spend and results are not public), in three angles: the 25 Oct Open House (sign-up on Microsoft Forms, which your site's Pixel cannot attribute), "Another Saturday on a screen?" (WhatsApp trial enquiry) and "build, test, figure it out" (Learn More → /screentime.html).
- **The landing page those ads use:** GA4 and the Google Ads tag load with the page, and a Google Ads conversion fires on the WhatsApp tap. In the page code the Meta Pixel is initialised only inside the WhatsApp-tap handler, and the trial form sends Lead only if the Pixel is already loaded. Unless a server-side setup I cannot see covers it, Meta gets no PageView for retargeting and little booking signal.
- **First fix, after checking in the account:** Pixel on page view (with consent where needed); Lead on submit via Pixel and Conversions API with one event ID; the **paid S$30 booking** as primary conversion on both platforms (imported into Google Ads as converted leads); the WhatsApp tap secondary; Open House sign-up on your own site.

CAMPAIGN STRUCTURE

CAMPAIGN	AD GROUPS AND KEYWORDS (PHRASE / EXACT), SINGAPORE SEARCHES A MONTH	LANDING PAGE
Brand	Meta Robotics, Meta Robotics Singapore, common misspellings	Home
Classes by need	robotics singapore, coding for kids, coding class for kids (100 – 1K each) · robotics for kids, robotics class singapore, coding class singapore (10 – 100 each)	Programme pages by age band
Near me, by centre	7 ad groups, "robotics class" + each centre's area; tight radius per centre	Each centre's location page
Assessment (RDA)	robotics assessment for kids, STEM assessment; Novena and Katong catchments only, where RDA runs	RDA page
DSA, Jan – Jun	robotics DSA, DSA robotics secondary school, robotics portfolio DSA	DSA page
Competitions	robotics competition singapore (10 – 100, low competition) · FIRST LEGO League	Most relevant programme page
Holidays, 3 – 4 weeks before each break	holiday camp singapore (100 – 1K) · robotics / coding holiday camp	Holiday programme (S$168 / 328 / 439)

Keyword Planner, Singapore, Oct 2025 – Sep 2026 (ranges, because the account I used has no active spend). Top-of-page bids: coding class for kids ≈ USD 2.7 – 12.8, robotics singapore ≈ USD 1.2 – 3.5. "Robotics class for kids", "STEM class for kids" and "AI class for kids" returned no reportable volume here, so I deprioritised them. The ranges suggest a narrow high-intent Search opportunity: Search captures parents already looking, Meta reaches the wider parent audience.

Negative keywords from day one: free, toy, kit, jobs, salary, engineer, university, adult, degree. Search terms reviewed twice a week in month one. Meta side: parent audiences only (adults), lead or WhatsApp objectives by child age and centre radius, and retargeting of visitors who did not book, within policy and consent.

ADS AND ASSETS, USING ONLY FACTS FROM YOUR SITE

- Headlines: "Robotics & Coding for Ages 3–16" · "7 Centres Across Singapore" · "Book a S$30 Discovery Session" · "2-Time Parents World Award Winner"
- Sitelinks: Locations, Holiday Programme, DSA, Robotics Discovery Assessment
- Location assets from the seven Business Profiles; call and WhatsApp assets in opening hours

DECISIONS BY CONDITION, NOT A FIXED RECIPE

- No reliable conversion yet: fix tracking before changing bidding
- Steady paid bookings recorded: conversion-based bidding (Maximise Conversions, then a target CPA)
- Too few paid bookings: qualified leads as an interim signal; low volume per centre: merge ad groups, keep reporting by centre

My first 30 days at Meta Robotics

Written from your public website only (seven centres; Adapter to King programmes for ages 3 – 16; "Book a Discovery Session" form → WhatsApp → S$30 to confirm; the Robotics Discovery Assessment at Novena and Katong). I have not seen your ad accounts, so every point below is a hypothesis to check in week 1.

Meta / Google ad → Website form: age, centre → Pre-filled WhatsApp → S$30 Discovery Session paid → Attended → Enrolled

The number I would manage to: **cost per paid discovery session**, by centre and age group, with enrolment rate as the quality check.

Week 1

Make the whole chain measurable

Audit GA4, GTM, Google Ads conversions and Meta Pixel / Conversions API. From your public site the WhatsApp tap appears to be the tracked conversion; I would confirm this in the account, then add the paid S$30 booking as the primary conversion on both platforms, with centre and age group as parameters, keeping the tap as a secondary signal. Agree one definition of a qualified lead with the team and set up a weekly sheet: leads → paid bookings → attended → enrolled, by centre and campaign.

Week 2

Find the waste

Split spend and cost per paid booking by centre, programme, campaign, placement and search term. Cut search terms and placements that bring chats but no bookings; check that each centre's ads reach parents within realistic travel time; add negative keywords and exclusions.

Week 3

First tests, one variable each

Age-specific creatives (a 4-year-old's first robot vs a 10-year-old's competition team), proof-led ads using your awards and NRC results, and the framing of the S$30 session against competitors' free or S$55–110 trials ("S$30 includes a written report and a parent consultation" vs a plain "S$30 trial"). Google Search: tight campaigns by intent ("robotics class + area", "coding class for kids").

Week 4

Decide and plan the holidays

Keep, scale or stop each test on cost per paid booking, not CTR. Plan the next school-holiday programme push ahead of time, and send a one-page report: what changed, why, what it cost, the next three tests.

WEEKLY UPDATE YOU WOULD GET FROM ME

- Spend, paid bookings, cost per booking, enrolments (by centre)
- Three insights, each with the action taken
- Tests running, tests decided, next tests
- Tracking issues found and fixed

WORKING ARRANGEMENT

- Hanoi, GMT+7: one hour behind Singapore, same working day
- Written updates in English; calls whenever needed
- I use AI for research, copy variants and anomaly checks; every budget decision is reviewed by me

QUESTIONS I WOULD ASK IN OUR FIRST CALL

- What does a paid discovery session cost you today, and how many sessions turn into enrolments, by centre?
- Which centres and age groups have spare capacity, so ads push where seats are open?
- How do enquiries split between the website form, WhatsApp and phone, and how is each tracked?
- How is budget split between Meta and Google now, and what was tried before that did not work?
- Which programmes are the most valuable over a student's lifetime (re-enrolment, holiday camps)?
